

# File Rakshak Overview

Thank you for choosing File Rakshak!

Folder Guard is a computer security software tool that lets you password-protect ,restrict access to files and folders of your choice, protects files by encrypting them and hiding the text behind the image files .

**CAUTION:** File Rakshak is a powerful tool that should be used with care. Please take time reading this User's Guide before protecting access to your important documents!

With File Rakshak you can:

## **Protect your private files and folders with passwords**

You can [protect](#) virtually any folder or file with a password, allowing only the authorized users to open the protected files or folders. You can protect an unlimited number of files and folders, each with its own password, or you can use the [master password](#) of Folder Guard to unprotect them all at once.

## **Protection with encryption**

File Rakshak protects your files [by encrypting](#) them. It means that there is no danger of losing your information if someone has seen it because it is in encrypted formate : with Folder Guard all your files remain intact, without modification of any kind.

## **Protection with steganography**

File Rakshak protects our confidential information (text files) by encrypting them behind the image files . Authenticated users can decrypt the image files to see the content behind that .
